DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1 to 18 are rejected under 35 U.S.C. 102(e) as being anticipated by each of Pike et al. (Pike '362, US Patent No. 6,544,362), Pike et al. (Pike '155, US Patent No. 6,610,155), Pike et al. (Pike '388, US Patent No. 6,579,388) or Pike et al. (Pike '373, US Patent No. 6,638,373).

The applied references have a common assignee and a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Each of these references teaches at least one specific example of an alloy that is encompassed by the instant claims. See Table 1 of each reference, In Pike '362 and Pike '373 see Alloy N and In Pike '155 and Pike '388 see Alloy 11.

Application/Control Number: 10/656,010

Art Unit: 1742

Double Patenting

3. Claims 1 to 18 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 to 17 of U.S. Patent No. 6,638,373. Although the conflicting claims are not identical, they are not patentably distinct from each other because the alloys composition in these set of claims overlap.

These two sets of claims differ in that they do not recite the exact same proportions.

However, one of ordinary skill in the art at the time the invention was made would have considered the invention to have been obvious because the claimed alloy proportions in these two sets of claims overlap and therefore are considered to be prima facie obvious. It would have been obvious to one of ordinary skill in the art to select any portion of the disclosed ranges including the instantly claimed ranges from the ranges disclosed in the prior art reference, particularly in view of the fact that;

"The normal desire of scientists or artisans to improve upon what is already generally known provides the motivation to determine where in a disclosed set of percentage ranges is the optimum combination of percentages", In re Peterson 65 USPQ2d 1379 (CAFC 2003).

<u>Also, In re Geisler</u> 43 USPQ2d 1365 (Fed. Cir. 1997); <u>In re Woodruff</u>, 16 USPQ2d 1934 (CCPA 1976); <u>In re Malagari</u>, 182 USPQ 549, 553 (CCPA 1974) and MPEP 2144.05.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John P. Sheehan whose telephone number is (571)
